USER GUIDE

Tarco HRIS for Odoo 19

Human Resources Management - complete how-to

Prepared for Tarco Aviation Services - Human Resources Department

Odoo 19 Enterprise | Module version 19.0.1.0.20 | Issued 25 October 2026

What is inside

Employee file
Codes, personal data, salary and documents.

Contracts
89-day probation, renewals, rehire on the same code.

Attendance
ZKTeco fingerprint via BioTime, shifts, lateness after 08:15.

Leave
21 or 30 day schemes, sick leave, holidays, encashment.

Missions and overtime
Group missions, overtime at 1.5x and 2x.

Penalties and rewards
Generate from attendance, checkable reasons, bulk confirm.

Advances and loans
Instalments capped at the gross salary.

Recruitment
Headcount, apply link, ranked candidates.

Dashboard and reports
Company or own records, plus 20 PDF and Excel reports.

CHAPTER 01

1 Introduction

What the module does, the HRIS dashboard, where to find it and who can use it.

Tarco HRIS is a custom Odoo 19 module built from the Tarco Aviation Services HR requirements document (TAS/HRM, issue 01, 1 January 2024). It extends the standard Odoo Employees, Attendance, Time Off, Recruitment and Payroll applications, so everything you already know in Odoo keeps working. The module adds the Tarco rules on top: employee codes, the 89-day probation, the 08:15 lateness rule, overtime at 1.5x and 2x, the 21 and 30 day leave schemes, Labour Law 1997 penalties, salary advances and the reports HR asked for.

1.1 Where to find it

Open the **Employees** application and choose the **Tarco HRIS** menu. Every screen in this guide lives under that menu.

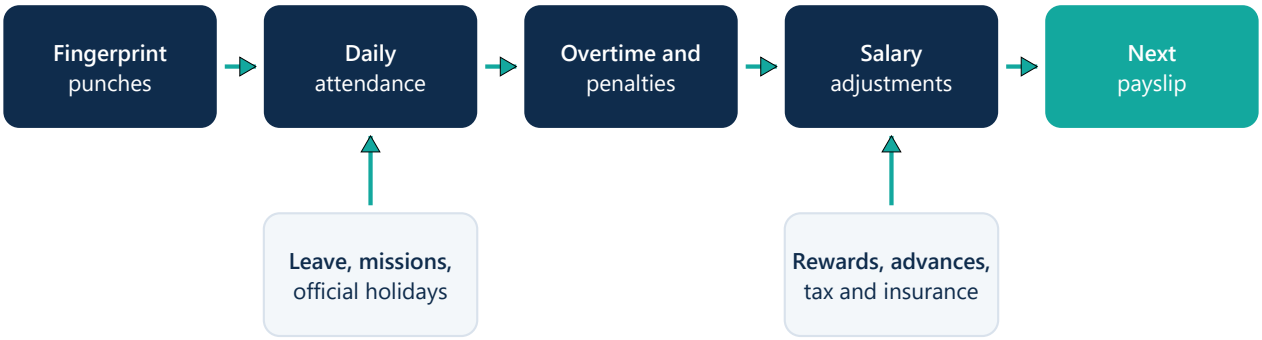

Menu	What it contains
Dashboard	Tiles of HRIS figures, plus a Charts view (donut, histogram, bar and line). HR sees the company. An employee sees only their own records.
Employee file	Employees with the HR File page, and onboarding notices.
Contracts	All contracts; probation ending and renewals due use the Payroll trial end and contract end dates.
Attendance	Shifts and the daily attendance summary built from fingerprint punches.
Leave	Leave requests, official holidays, leave encashment (sold leave).
Missions	Business missions with one or many employees, in any currency, and the mission order PDF.
Overtime	Overtime batches calculated from fingerprint punches.
Penalties and rewards	Penalty rules, generate from attendance, checkable reasons, bulk confirm, rewards.
Advances and loans	Short advances, long-term loans, goods purchases and other deductions.
Recruitment	Job positions with screening questions, and applicants.
KPIs	Question templates and employee performance reviews.
Reports	Period reports (PDF and Excel), employee file report, payroll rule setup.
Configuration	Demo data: load or remove sample records in every section.

1.2 Who can do what

Role	Access
HR Officer (Employees: Officer)	Full access to every Tarco HRIS screen and report.
HR Administrator (Employees: Administrator)	Everything an officer can do, plus the payroll rule setup action.
Department manager	Can request missions for their team, approve leave as the employee approver, and fill KPI reviews for their direct reports.
Employee	Opens the HRIS dashboard for their own attendance, leave, missions, overtime, penalties, rewards, advances, encashment and KPI reviews. Requests leave through Time Off.

Tip
Access is given in **Settings › Users & Companies › Users**. Open the user and set the Employees role.

1.3 How the pieces connect

- The **employee code** is the key. It is generated automatically from the year and month of joining (for example 202610001), it is shown in front of the name everywhere, it can be typed in any employee field to find the person, and it is copied to the Badge ID used by the fingerprint device.
- Fingerprint punches from the ZKTeco devices are collected by the ZKBioTime software, and Odoo fetches the employees and their check-ins and check-outs from BioTime automatically (chapter 5.2). Tarco HRIS turns them into one **daily attendance** line per employee per day.
- Approved leave, approved missions and official holidays are written onto the same daily line, so every attendance report shows them.
- Penalties, rewards, overtime, advances, leave deductions, leave encashment, tax and social insurance are posted as **salary adjustments** and appear on the next payslip automatically.

1.4 The HRIS dashboard

Open **Employees › Tarco HRIS › Dashboard**. The first screen is the dashboard. It is the same design for everyone; the numbers change with the user's role. Click **Refresh** after you post or confirm records.

Who opens it	What they see
HR Officer or HR Administrator	Company overview: every employee, probation ending, contract renewals, applicants, unpublished holidays, and this month's attendance, leave, missions, overtime, penalties, rewards, advances, encashment and KPIs.
Employee (no HR role)	My records only. Tiles and lists are limited to the employee linked to that user. Other people's files never appear. If the user has no employee, the dashboard says so.

Each tile opens the matching list, already filtered. The pages under the tiles show the latest late or absent days, leave, missions, penalties, rewards, advances and KPI reviews.

A second view, **Tarco HRIS › Dashboard charts**, draws the same scoped data as graphs. From the tile dashboard click **Charts**, or open the menu directly. The charts are:

Chart	What it shows
Attendance mix (donut)	This month's daily lines split by status: present, late, absent, leave, mission, holiday, rest.
Leave types (donut)	Approved leave days this month, by leave type.
Daily attendance (histogram)	Present, late and absent counts for each day.
Lateness trend (line)	Late minutes added up by day.
Payroll extras (bar)	Overtime, penalties, rewards and encashment amounts this month.
Headcount by department (bar)	Active employees per department. HR only.

Scroll the Charts page to see every graph. Daily attendance also has Graph and Pivot views: open **Tarco HRIS › Attendance › Daily attendance** and switch the view icons.

> **Tip**
> An employee must be linked on the user form (**Settings › Users & Companies › Users**). The dashboard uses that link to hide other records.

CHAPTER 02

2 First-time setup

One-time configuration before HR starts daily work.

Do these steps once, in this order, before HR starts daily work.

1. Create departments and sections in **Employees › Configuration › Departments**. A section is a department placed under its parent department.
2. Review the shifts in **Tarco HRIS › Attendance › Shifts**. Two shifts are created for you: Day shift 08:00-16:00 and Shift 08:00-20:00, both with Friday as the rest day.
3. Enter the year's official holidays in **Tarco HRIS › Leave › Official holidays** and click **Publish on calendar** on each one.
4. Check the penalty rules in **Tarco HRIS › Penalties and rewards › Penalty rules**. Set the amount on the Conduct rule and adjust the legal text to the Labour Law 1997 articles HR applies.
5. Create KPI question templates in **Tarco HRIS › KPIs › Question templates**.
6. Make sure each payroll structure has the Tarco rules. They are added automatically at install and every day. To add them immediately, an HR Administrator runs **Tarco HRIS › Reports › Create payroll rules**.
7. Complete every employee file (next chapter), then select the employees and click **Apply leave scheme** on the list (or Actions) to give the year's leave balance.

> **Important**
> Employees must have a Badge ID that matches their Employee ID in BioTime. When an employee gets a code and the Badge ID is empty, the code is copied into it for you. A Badge ID that is already filled is never changed.

2.1 Demo data

To try every screen with sample records, open **Tarco HRIS › Configuration › Demo data**. Tick **Activate demo data** and click **Apply**. Odoo creates employees, documents, onboarding, contracts, fingerprint attendance, leave, holidays, a mission, overtime, penalties, a reward, advances, a job with applicants, a KPI review and the matching salary adjustments.

Untick the same box and click Apply to remove **only** those sample records. Records you created yourself stay. Ticking Apply again while demo data is already on replaces the sample set.

> **Important**
> Use demo data on a training or test database. Do not load it on the live company file if HR has already started real work.

CHAPTER 03

3 Employee file

Codes, personal data, salary, documents and onboarding in one screen.

All the employee information is entered from one screen. Open **Tarco HRIS › Employee file › Employees**, create or open an employee, and go to the **HR File** page.

3.1 Fields on the HR File page

Group	Fields
Identity	Employee code, department, section, job position, hire date, birthday, nationality, gender, marital status, religion, qualification (basic, secondary, diploma, bachelor, higher diploma, master, doctorate), field of study, school, years of experience.
Contact and address	Private phone, work mobile, emergency phone, private email, work email, and the address as state, city, district and block.
Contract	Probation end, Payroll probation end, contract end (Payroll), annual renewal date, contract alert, length of service, resignation date, rehire date, shift, exempt from lateness, overtime calculation.
Salary	Basic salary, cost of living allowance, transport allowance, housing allowance, other allowances, gross salary (calculated), subject to tax and tax %, subject to social insurance and insurance %, adjust taxes automatically, taxes posted for.
Leave balance	Annual leave scheme (21 or 30 days), casual days, annual days.
Leave encashment	Days and amount confirmed this month (extra on this payslip), the list of encashment records, and the linked salary adjustment.
Hiring and audit documents	One line per document with a file attachment.

3.2 Create a new employee

1. Click **New** and type the employee name.
2. On the HR File page enter the **Hire date**. The probation end (hire date + 89 days) and the annual renewal date (hire date + 1 year) fill in automatically.
3. Leave the **Employee code** empty. It is generated when you save (see 3.3).
4. Fill the identity, contact and address fields.
5. Enter the salary components. The gross salary is the total and is copied to the employee contract wage.
6. Choose the leave scheme and the shift.
7. Add the documents and tick **Received** as each one arrives.
8. Save.

3.3 Automatic employee codes

The employee code is made of the **year and month of joining** followed by a **3-digit serial** for that month. The code contains only digits, so it can also be used as the fingerprint device ID.

Joined	Order in the month	Code
3 October 2026	1st employee	202610001
20 October 2026	2nd employee	202610002
1 March 2024	1st employee	202403001

- **New employee:** the code is created as soon as you save, from the Hire date. If the Hire date is empty, the current month is used. You can still type a code yourself to override it.
- **Existing employees:** in the employee list tick the employees, then choose **Actions › Generate employee code**. The joining month comes from the Hire date, otherwise the contract start date, otherwise the date the record was created. Employees are numbered in the order they joined. Employees whose code already matches their joining month are skipped, and a message tells you how many codes were generated.
- **Unique:** the serial continues from the highest code already used in that month, including archived employees, and the database refuses a duplicate code.

> **Important**
> Generating codes for existing employees does not change a Badge ID that is already filled, so fingerprint punches keep matching. Update the device or the Badge ID yourself if you want them to use the new code.

3.4 Hiring and audit documents

Group	Document kinds
Hiring document	Birth certificate, qualification, experience certificates, photograph, national ID, other.
Audit document	Employment application, employment contract, job description, acknowledgement of work regulations, other.

3.5 Buttons on the employee

Button	What it does
Apply leave scheme	Creates this year's approved casual and annual allocations from the scheme. Select many employees on the list and use the header button or Actions. A type that already has an allocation this year is left as it is. Resigned staff are skipped.
Post tax and insurance	Creates one-time deductions for this month: gross x tax % and gross x social insurance %. Shown only when Adjust taxes automatically is off. Posting twice in the same month is refused (see 4.4).
Onboarding notice	Opens a notice to the departments that prepare for the new employee.
Print file	Opens the employee file report with check boxes to choose the sections.
Register resignation / Rehire / Renew contract	See chapter 4.
Smart buttons	Documents, Missions, Penalties, Rewards, Advances, Encashment and KPIs open the related records.
Actions > Generate employee code	Creates the code from the joining month (see 3.3). Also available for many employees at once from the list.

3.6 Onboarding notice

Use it to notify the departments concerned when someone is hired: induction training, safety briefing, computer, library tools, uniform, or supplies from the warehouse.

1. On the employee click **Onboarding notice**, or open **Tarco HRIS › Employee file › Onboarding notices** and click New.
2. Tick the items needed and add a note.
3. Click **Notify departments**. A message is posted on the notice, a to-do activity is created for the employee's manager (or the HR responsible), and an email goes to the manager and the employee.

The message is written as a normal letter, ready to read: a welcome line, the list of items to prepare, the job position, department, start date and manager, your note, and the HR signature. The email subject is **Welcome [name] - onboarding arrangements**.

3.7 Finding an employee

Type the employee code or the name in the search bar of any employee list, or in any field that asks for an employee (missions, penalties, advances and so on). The code is shown in square brackets before the name, for example **[202610001] Ahmed Ali**. Typing part of a code, such as **202610**, lists everyone who joined in that month.

CHAPTER 04

4 Employment contracts

Probation and renewals from the Payroll dates, alerts, resignation and rehire.

Contract dates are kept on the employee. Use **Tarco HRIS › Contracts › Contracts** to see every employee with hire, probation, contract end, resignation and rehire dates and the length of service.

4.1 Probation and renewal dates

- **Probation end** is set to hire date + 89 days and is copied to the trial end date on the employee **Payroll** page. If you change it by hand, **Probation set manually** is ticked and the date is no longer recalculated. **Contracts › Probation ending** shows only employees whose **Payroll probation / trial end** falls in the next 10 days. People with no trial end date on Payroll are not listed.
- **Contract end** is the expiry date on the employee **Payroll** page (Odoo contract end). **Contracts › Renewals due** shows only employees whose contract end falls in the next 10 days. Open-ended contracts (no end date) and the automatic annual review date are not used for this list.
- **Annual renewal date** is set to hire date + 1 year for yearly review. It does not put the employee on Renewals due. Tick **Renewal set manually** to keep your own review date.
- The probation end and the gross salary are copied to the Odoo contract of the employee.

4.2 Alerts 7 to 10 days before

Every day the scheduled action **Tarco HRIS: attendance and contract alerts** looks for probation ends and **Payroll contract end dates** in the next 10 days. For each one it creates a to-do activity for the HR responsible on the contract (or the manager) and emails the employee, the manager and that user. Each date is alerted only once; changing the date resets the alert.

Use **Contracts › Probation ending** and **Contracts › Renewals due** to see the lists at any time. They use the search filters **Probation ending (10 days)** and **Contract expiry (10 days)**, which you can also apply on any employee list.

4.3 Renew, resign and rehire

Action	How	Result
Renew the contract	Click **Renew contract** on the employee.	Renewal date moves forward one year.
Resignation	Click **Register resignation**.	Resignation date and departure date are set to today. Change the date if the resignation was on another day. Archive the employee when the last working day has passed.
Rehire	Unarchive the employee if needed, then click **Rehire**.	Same employee and same code. The rehire date is today, the resignation is cleared, and new probation and renewal dates are calculated from today. The original hire date is kept.

4.4 Statutory and internal deductions

On the HR File page tick **Subject to tax** and/or **Subject to social insurance** and enter the percentages. Then choose how the monthly deduction is posted with the **Adjust taxes automatically** flag, shown under the tax fields.

Adjust taxes automatically	What happens each month
Ticked	At the start of every month the daily scheduled action creates the income tax and social insurance salary adjustments (gross x %) for the month. They are deducted on that month's payslip. Nobody has to click anything, and the Post tax and insurance button is hidden.
Not ticked	An HR officer opens the employee and clicks **Post tax and insurance** once every payroll month, before running payroll.

- The field **Taxes posted for** shows the last month posted. Each month is posted only once, whether by the button or automatically, so clicking again in the same month does nothing and shows a message.
- The amount uses the gross salary at the moment of posting. If the salary changes after the month is posted, edit that month's adjustment in **Payroll › Employees › Salary Adjustments**.
- Automatic posting stops for archived employees and for months after the resignation date.
- The adjustments are named, for example, **Income tax 10/2026 [202610001] Ahmed Ali**.

> **Tip**
> Tick Adjust taxes automatically for all permanent staff, and leave it off only for cases HR wants to check by hand each month.

CHAPTER 05

5 Attendance and shifts

ZKTeco devices through BioTime, shifts, lateness and the daily attendance sheet.

5.1 Shifts

Open **Tarco HRIS › Attendance › Shifts**. A shift defines the working hours and how lateness and overtime are counted.

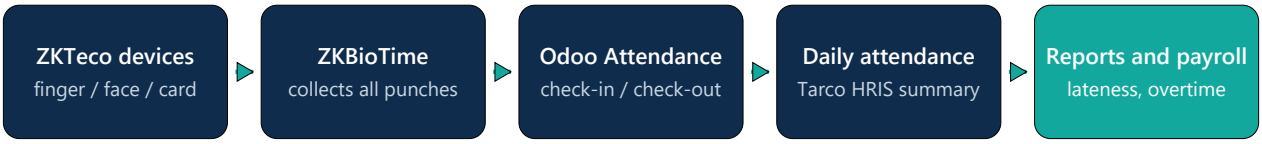

Field	Meaning
Start / End	Shift hours, for example 08:00 to 16:00, or 08:00 to 20:00.
Crosses midnight	Tick for night shifts that end the next day.
Lateness starts after (minutes)	Grace period. With 15 minutes and a start of 08:00, lateness counts from 08:15.
Paid day hours	Hours paid for a full day, normally 8, even if the employee leaves at 16:30.
Overtime starts at	Time after which overtime is counted, normally 16:00.
Rest days	Tick the weekly rest days of this shift (Friday by default).
Departments / Job positions	Apply the shift to whole departments or job groups.
Specific employees	Apply the shift to named people inside a department.
Exempt from lateness	People on this shift who are never counted late.

Odoo picks the shift of an employee in this order: the **Shift** field on the employee, a shift that lists the employee, a shift that matches the department or job, then a shift with no department, job or employee.

Tip
To exempt one person without changing the shift, tick **Exempt from lateness** on the employee.

5.2 Fingerprint devices and BioTime

Tarco HRIS works with **ZKTeco biometric devices** (fingerprint, face and card terminals) managed by the **ZKBioTime** attendance software. Odoo does not talk to each terminal: it is linked to the BioTime server, which already collects the punches from every device on site. From BioTime, Odoo fetches all employees and all their check-in and check-out punches, with no manual entry.

Data fetched from BioTime	What Odoo does with it
Employees	All BioTime employees are read with their employee ID, name and department. Each one is matched to the Odoo employee whose **Badge ID** equals the BioTime employee ID.
Check-in punches	Create the check-in of an attendance line in Odoo Attendance.
Check-out punches	Close the open attendance line with the check-out time.
Punch time	Converted from the BioTime server time zone to Odoo time, so lateness after 08:15 is measured in local time.
Terminal	The device that recorded the punch is kept for checking.

Matching employees

- Use the same number everywhere: the **employee code** in Odoo (for example 202610001), the **Badge ID** in Odoo and the **Employee ID** in BioTime.
- When an employee gets a code and the Badge ID is empty, the code is copied into the Badge ID automatically (chapter 3.3). Enroll the employee in BioTime with the same number.
- For staff already enrolled in BioTime with another number, type that number in the Badge ID so the punches match. A filled Badge ID is never changed by Odoo.

Setting up the link

1. In BioTime, add all terminals and check that they are online and that punches appear in BioTime transactions.
2. In BioTime, create a user for Odoo with permission to read employees and transactions (API access).
3. In the BioTime connection settings in Odoo, enter the BioTime server address and port, that user and its password, then test the connection.
4. Fetch the employees once and check that every active employee is matched by Badge ID.
5. Leave the scheduled fetch active so new punches arrive in Odoo Attendance automatically during the day.

Important
The Odoo server must be able to reach the BioTime server on the network (same LAN or VPN), and the BioTime server clock and time zone must be correct. A wrong clock shifts every punch and creates false lateness.

5.3 Daily attendance

Every day Tarco HRIS summarises the last three days of punches into **Attendance › Daily attendance**: one line per employee per day with the first check-in, the last check-out, worked hours, late minutes and overtime. You can also summarise any period with the **Sync fingerprint** button of the period report (chapter 13), for example after BioTime was offline and the punches arrived late.

Status	When it is used
Present	Punched in on time and out.
Late	Punched in after the grace period. The late minutes are shown.
Absent	No punch on a working day with no leave, mission or holiday.
Leave	An approved leave covers the day.
Mission	An approved mission covers the day.
Public holiday	An official holiday, with no punch.
Rest day	The shift rest day, with no punch.
Missing checkout	Punched in but not out. Correct the punch in Attendance and sync again.

5.4 How the day is calculated

- Leaving at or after the shift end gives the full paid day (8 hours), so 16:30 still counts as 8 hours.
- Overtime is the time worked after **Overtime starts at**.
- Overtime is paid at **1.5x** from Saturday to Thursday and **2x** on Friday and official holidays.
- Hourly wage = gross salary / 30 / 8.
- Set **Overtime calculation** on the employee to **Do not pay overtime** to record hours without paying them.

> **Important**
> A day already included in a confirmed overtime batch is locked and is not recalculated.

CHAPTER 06

6 Leave

Leave types, yearly balance, approvals, holidays and encashment.

6.1 Leave types

Type	Rules
Annual leave	Uses the yearly balance. Approved by the employee's approver and then by HR.
Casual leave	Uses the yearly balance (6 days). Approved by the employee's approver and then by HR.
Sick leave	Kept separate from other leave. No balance needed. A medical document can be attached. Approved by HR.
Official holiday leave	For official holidays taken. Approved by HR.

6.2 Annual balance

The scheme on the employee sets the balance: **21 days** = 6 casual + 15 annual, or **30 days** = 6 casual + 24 annual. You can change the casual and annual days by hand. At the start of each year, open the employee list, select everyone who needs a balance, and click **Apply leave scheme** in the list header or under Actions. The form button still applies one employee. A type that already has an allocation this year is left as it is. Resigned staff are skipped. A notification shows how many received allocations, already had this year, or were skipped.

6.3 Request and approve leave

1. The department manager or section supervisor opens **Tarco HRIS › Leave › Leave requests** (or the Time Off app) and creates the request for the employee.
2. Choose the leave type and dates. The form shows the **Scheme balance** (days left) and the days **Taken this month**.
3. Choose the **Deduction**: **From balance / full pay**, **Deduct from salary**, or **Partial salary deduction** with a percentage.
4. The approver approves, then HR validates. HR can also enter, edit, approve or refuse any request.

When the leave is validated with a salary deduction, the amount is days x daily wage (gross / 30) x percentage, and it is posted to the next payslip. Use partial deduction for sick leave that is paid in part.

6.4 Official holidays

1. Open **Tarco HRIS › Leave › Official holidays** and click New.
2. Enter the name and the original date.
3. If the holiday is moved, enter the **Moved to** date. The **Observed** date is the one used everywhere.
4. Click **Publish on calendar**. Status becomes **Published**, the button is replaced by **Update on calendar** / **Remove from calendar**, and a company time off is created on the working calendar for the observed date. After you move a date, click Update on calendar.

6.5 Leave encashment (selling leave)

1. Open **Tarco HRIS › Leave › Leave encashment** and click New.
2. Choose the employee and the number of days. The daily rate defaults to gross / 30 and can be changed.
3. Click **Confirm**. The amount is posted as a salary adjustment (Tarco Earning) and is paid extra on that month's payslip. Reduce the remaining balance in Time Off allocations if the sold days must be removed from it.

On the employee, the **Encashment** smart button opens all leave encashment records. The **HR File** page shows **Encashment days this month** and **Encashment this month** — the extra amount confirmed for the current calendar month — plus the list of records and the linked salary adjustment, same as other payroll extras.

CHAPTER 07

7 Missions

Business missions for one or many employees, in any currency, with a printable mission order.

A mission can be requested by the department manager or by HR, at any time of day, and can include many employees without opening each employee.

7.1 Create and approve a mission

1. Open **Tarco HRIS › Missions** and click New.
2. Enter the place, purpose, start and end dates, departure time and end time (any time in 24 hours).
3. Choose the **Mission currency**, for example USD for a mission abroad. It defaults to the company currency.
4. Enter the cost per person per day, in the mission currency, if the mission has an allowance.
5. Add employees on the lines by code or by name. Each line shows the job and the employee's amount.
6. HR clicks **Approve**. Approved missions appear in daily attendance and in every attendance report.
7. Click **Done** when the mission is finished, or **Cancel** to drop it.

The form calculates the number of days, the number of employees, total hours (hours per day x days x employees) and the total cost (cost per day x days x employees).

7.2 Mission currency

Amount	Currency	How it is calculated
Cost per person per day	Mission currency	Entered by you.
Employee amount (on each line)	Mission currency	Cost per day x number of days.
Total cost	Mission currency	Cost per day x days x employees. The line total matches it.
Total cost in company currency	Company currency	Total cost converted at the exchange rate of the mission start date. Shown only when the currencies differ.

- The currency can be changed only while the mission is in Draft, so approved amounts stay in the approved currency.
- The Missions list shows the currency of each mission. Add the optional column **Total cost in company currency** to see a total for all missions together.
- The Missions period report (chapter 13) shows each mission in its own currency and in company currency, and adds up the cost per place in company currency.

Important
Activate the currency and keep its exchange rates up to date in **Accounting › Configuration › Currencies** (or Invoicing > Configuration > Currencies). Without a rate for the mission date, the company currency amount equals the mission amount.

7.3 Print the mission order

Click **Print mission order** at the top of the mission, or select one or more missions in the list and choose **Print › Mission Order**. The PDF is printed on the company letterhead and contains:

- the reference, status, place, currency, dates with departure and end times, days, employees, cost per day and total hours;
- the purpose of the mission;
- the employee table with code, name, department, job, days and amount, and the total in the mission currency;
- the equivalent in company currency when the mission is in another currency;
- signature boxes for the requester, Human Resources and the approver.

Tip
Print the mission order after approval and hand it to the employees with their allowance.

CHAPTER 08

8 Overtime

Overtime batches calculated from fingerprint punches.

Overtime is calculated automatically from fingerprint punches (chapter 5). An overtime batch collects it for a period and sends it to payroll.

1. Open **Tarco HRIS › Overtime** and click New.
2. Enter the period and, if needed, a department.
3. Click **Fill from fingerprint**. Attendance is summarised and one line per employee shows hours at 1.5x, hours at 2x, total hours and amount.
4. Check the lines, then click **Confirm and post**. Each amount is added to the employee's next payslip.

! **Important**
Clicking Cancel on a confirmed batch releases the days so they can be used again. It does not remove salary adjustments already created; close those in Payroll if needed.

CHAPTER 09

9 Penalties and rewards

Labour Law penalties, generate from attendance, a checkable reason on each draft, and bulk confirm.

9.1 Penalty rules

Rules are kept in **Penalties and rewards › Penalty rules**. Each rule has a fixed legal reason text and a calculation.

Calculation	Amount
Fixed amount	The amount on the rule.
Days of wage	Days x gross / 30.
Hours of wage	Hours x gross / 30 / 8.
Percent of basic salary	Basic salary x percent.

Three rules are provided: **Lateness** (hours of wage), **Absence** (one day of wage) and **Conduct** (fixed amount, set it before use).

9.2 Lateness and absence penalties from attendance

The wizard does not invent penalties. It reads the **daily attendance** sheet (chapter 5.3) for the dates you choose and creates **one draft penalty per employee per day** that qualifies.

Wizard option	Created when	Amount
Include lateness	The attendance day has late minutes: check-in after shift start plus grace (default 08:00 + 15 minutes). Staff marked Exempt from lateness are skipped.	Late hours x hourly wage (gross / 30 / 8). Rule: Lateness.
Include absence	The attendance day status is Absent: a working day after hire and before resignation, with no check-in, and not on approved leave, an approved mission, a public holiday or a shift rest day.	One day of wage (gross / 30). Rule: Absence.

A day that already has a non-cancelled penalty for the same employee, rule and date is not created again. **Conduct** penalties are never generated here — enter those by hand (9.5).

9.3 Reason on each generated penalty

Every generated penalty fills the **Reason** field with the attendance facts so HR can check the record against the system before confirming. The first line names the type, date, employee and code; the following lines list:

- Department, and the shift with start and end (or that no shift is assigned — treated as a working day 08:00-16:00).
- Check-in and check-out times, or **none**.
- For lateness: minutes after the grace limit (for example 27 minutes after 08:15).
- Whether the day was leave, mission, public holiday or rest day.
- The attendance day status. Open **Attendance › Daily attendance** for that employee and date to confirm.

The Reason column is shown on the penalties list. Drafts created before this text still show the old legal sentence. Select them and click **Fill reason from attendance**, or run Generate from attendance again on the same dates — draft reasons are updated and duplicates are not created.

9.4 Generate and confirm in bulk

1. Open **Penalties and rewards › Generate from attendance**.
2. Choose the period, optionally a department, and tick lateness and/or absence.
3. Click **Generate**. The list of generated drafts opens, each with a clear reason.
4. Read the Reason column. Cancel any line that is not correct (for example a missing BioTime punch).
5. Select the drafts to apply. Click **Confirm selected** at the top of the list, or use **Actions › Confirm penalties**. Only Draft rows are posted to payroll; already confirmed rows are skipped.

> **Tip**
> You can confirm dozens of drafts in one click. Do not confirm a line until the reason matches Daily attendance.

9.5 Conduct penalties on one employee or a group

1. Open **Penalties and rewards › Penalties** and click New.
2. Choose the rule. The legal reason fills in automatically.
3. Enter the penalty date and the date it applies from.
4. Add employees by code. Their basic and gross wage appear and the amount is calculated. Enter days or hours to override the rule default, or type the amount.
5. To penalise a whole department, choose it and click **Add department**.
6. The **Repeat** column shows how many times the employee has received the same rule.
7. Click **Confirm**. Each amount is deducted on the next payslip.

9.6 Rewards and grants

1. Open **Penalties and rewards › Rewards** and click New.
2. Choose the employee by code. The name, department, section and wage items appear.
3. Enter the reason and date, then choose **Amount** or **Days of wage**.
4. Click **Confirm**. The reward is added to the next payslip.

CHAPTER 10

10 Advances and loans

Short advances, long-term loans and instalment schedules.

Type	How it is recovered
Short advance	Deducted once, from the salary of the due date month.
Long-term loan	Deducted in equal monthly instalments, starting at the due date.
Goods purchase	Same as a loan: one or more instalments.
Other deduction	Any other deduction, in one or more instalments.

1. Open **Tarco HRIS › Advances and loans** and click New.
2. Choose the employee, type and description, and enter the amount.
3. For instalments, enter the number of instalments. The monthly amount is calculated.
4. Enter the due date of the first deduction.
5. Click **Confirm**. The instalment schedule is created and the deduction is sent to payroll.

> **Important**
> The monthly instalment cannot be more than the employee's gross salary. Odoo refuses to save it.

After each payroll, the daily scheduled action marks instalments as paid from what payroll has deducted, updates the paid and remaining amounts, and sets the advance to Done when it is fully paid.

CHAPTER 11

11 Recruitment

Headcount, public application link, ranking and interviews.

11.1 Prepare the job position

1. Open Tarco HRIS › Recruitment › Job positions and open the job.
2. Enter the **Approved headcount**. **Vacant posts** is the approved headcount minus current employees.
3. Click **Open recruitment for vacancies** to set the recruitment target to the number of vacant posts.
4. Fill the job request: general objective, required experience, qualification, required skills, previous experience, training and expected wage.
5. Add the **screening questions**. Enter an expected answer to score it, or leave it empty to accept any answer.
6. Share the **Application link** (/tarco/jobs/ID/apply) in the job advertisement.

> **Tip**
> The application link uses the Odoo base URL. It must be reachable from the internet for outside candidates to apply.

11.2 Applications and ranking

Candidates open the link, answer the questions and upload their CV. Each application gets a **Match %**: up to 80% for answers that match, plus up to 20% for complete information (name, email, phone, CV, qualification). Applicants are listed from the highest match down.

11.3 Screening tracks and interviews

1. Open Tarco HRIS › Recruitment › Applicants. Use the filters Shortlisted, Maybe and Rejected.
2. On each applicant set the **Screening track** to Shortlisted, Maybe or Rejected.
3. Set the **Interview** date and time and the interview round.
4. Click **Email interview time**. The candidate receives the invitation from the company email, with the date and time in local time.

11.4 Interview meeting in the calendar

Email interview time also books the interview in the Odoo calendar, so nobody has to create the meeting by hand.

- A one-hour meeting named after the round and the candidate (for example **First interview - Ethan Carter**) is created at the interview date and time.
- The attendees are the candidate, the interviewers, the recruiter, the department manager and you.
- The **Meeting** smart button at the top of the applicant shows the date and time, for example **1 Meeting - 29 Oct 2026, 1:00 PM**. Click it to open the calendar.
- The **Interview meeting** field under Tarco screening opens the meeting itself.
- If you change the interview date, time or round, the same meeting moves. No second meeting is created.

> **Important**
> Set the interview date and time before clicking Email interview time. Without it Odoo stops with a message instead of sending.

CHAPTER 12

12 Performance KPIs

Question templates, scores, outputs and overall achievement.

12.1 Question templates

In **KPIs › Question templates** create a template per job group with questions, a weight for each question and a maximum score (5 by default).

12.2 Evaluate an employee

1. Open **KPIs › Reviews** and click New.
2. Choose the employee, the period and the template, then click **Load questions**.
3. The manager scores each question and adds comments. A score under 60% of the maximum is flagged as a problem point.
4. Add the **daily outputs** with a quality score from 1 to 5, or type an output quality %.
5. Actual hours and scheduled hours come from daily attendance and give the hours achievement %.
6. Click **Done**.

The **Overall %** is the average of the question score, hours achievement and output quality (parts with no value are left out). The employee's manager and HR can edit reviews.

CHAPTER 13

13 Reports

Period reports in PDF and Excel, the employee file report, and IBM Plex Sans Arabic on every HRIS PDF.

13.1 Period reports

1. Open **Tarco HRIS › Reports › Period reports**.
2. Choose the report, the period, and optionally a department or one employee.
3. Click **Print** for a PDF or **Export Excel** for a spreadsheet. For attendance, click **Sync fingerprint** first if the period is not yet summarised (Print does it for you).

Area	Report	Shows
Contracts	Contracts to renew	Renewals falling in the period.
Contracts	Length of service	Years, months and days of service per employee.
Contracts	Hires and resignations	Movement during the month or year.
Contracts	Turnover rate	Resignations / active headcount, monthly or yearly by the period chosen.
Contracts	Cost of hires and resignations	Monthly gross of people hired and of people who left.
Attendance	Attendance	Daily in and out, department strength with leave, absence and missions, and attendance % per employee.
Leave	Monthly leave	Leave in the period and its share of working days.
Leave	Official holidays	Holidays observed and official leave taken.
Leave	Annual leave	Annual and casual leave taken.
Leave	Sick leave	Sick leave with start, end and days.
Leave	Leave encashment cost	Paid cost of leave sold.
Missions	Missions	Missions with currency and cost, cost in company currency, and hours and cost per place.
Overtime	Overtime	Hours at 1.5x and 2x and cost per employee.
Discipline	Penalties	Per employee, total deducted, and repeated reasons with percentages.
Discipline	Rewards	Name, department, amount and total.
Advances	Advances due	Instalments due in the period.

Area	Report	Shows
Advances	Remaining advances	Running advances with paid and remaining amounts.
Advances	Advances paid in the period	All instalments recovered (use a full year for the annual report).
Recruitment	Recruitment	Open jobs with expected wages, applicants, matching CVs, first and final interviews.
KPIs	KPIs	Achievement per employee, department average, problem points, highest and lowest.

Tip
Choose one employee to get the leave, penalty or overtime history for the employee's file.

13.2 Employee file report

Click **Print file** on an employee, or open **Reports › Employee file report**. Tick the sections to include (personal data, job, salary, documents, contract, leave including this month's encashment, attendance, penalties, rewards, advances, KPIs) and click **Print**.

13.3 Arabic font on printed PDFs

All Tarco HRIS PDF reports — period reports, the employee file and the mission order — are printed with **IBM Plex Sans Arabic**, so Arabic names, legal texts and headings stay clear next to the English text.

CHAPTER 14

14 Payroll integration

How HR records reach the payslip.

Tarco HRIS does not change how payslips are computed. It creates salary adjustments in **Payroll › Employees › Salary Adjustments** that payroll picks up on the next payslip.

Source	Adjustment type	Effect on payslip
Rewards, overtime, leave encashment	Tarco Earning	Added to gross
Penalties, advances, leave deductions, tax, social insurance	Tarco Deduction	Deducted from net

Each adjustment carries a description such as "Penalty Lateness" or "Overtime OT/2026/0003", so the payslip lines are easy to read. When HR confirms the payslip (Done), every one-time salary adjustment for that payroll month is closed. A running loan stays open and only that month's instalment is marked paid.

Important
If a new payroll structure is created, run **Reports › Create payroll rules** (HR Administrator) so it gets the Tarco Earning and Tarco Deduction rules. Otherwise the daily scheduled action adds them the next day.

CHAPTER 15

15 Daily and monthly routine

A checklist for every day, month and year.

When	Who	Task
Daily	HR and employees	Open the HRIS dashboard tiles, then Dashboard charts, and work every tile that is not zero.
Daily	HR	Check activities for probation and renewal alerts. Fix missing checkouts in Attendance.
Daily	Managers	Request leave and missions for the team.
Daily	HR	Approve leave and missions.
Month end	HR	Generate lateness and absence penalties, check each Reason against Daily attendance, then click Confirm selected.
Month end	HR	Create and confirm the overtime batch.
Month end	HR	Post tax and insurance for employees without Adjust taxes automatically. The others are posted by the system at the start of the month.
Month end	HR	Confirm rewards, advances and encashments. On each employee, check Encashment this month before running payroll.
Month end	HR	Print the monthly reports.
Year start	HR	Enter official holidays. Select the employees and click Apply leave scheme once for all of them.
Each review period	Managers	Fill KPI reviews.

CHAPTER 16

16 Troubleshooting

Common problems and how to solve them.

Problem	Solution
An employee is absent although they came.	Check the punch is in BioTime transactions, the Badge ID matches the BioTime Employee ID and the punch is in Odoo Attendance, then sync the period again.
No new punches since this morning.	Check the BioTime server is running and reachable from Odoo, the devices are online in BioTime, and the scheduled fetch is active.
Punches are a few hours early or late.	Correct the BioTime server clock and time zone, and the time zone of the Odoo user that runs the fetch.
A BioTime employee is not matched.	Type the BioTime Employee ID in the Badge ID of the Odoo employee, then fetch again.
Status is Missing checkout.	Add the check-out in Attendance and sync again.
Overtime amount is zero.	Check the salary components are filled and Overtime calculation is not "Do not pay overtime".
Too many absence drafts after Generate.	A wide date range or missing BioTime punches marks working days as Absent. Check Daily attendance, cancel the wrong drafts, and fix Badge IDs or punches before generating again.
Reason still shows the old legal sentence.	Select the drafts and click Fill reason from attendance, or generate the same dates again. Drafts are updated, not duplicated.
Confirm selected does nothing.	Only Draft rows are confirmed. Already confirmed or cancelled records are skipped.
Penalty, reward, encashment or advance is not on the payslip.	Make sure the record is confirmed, the payslip period covers the date, and the structure has the Tarco rules. Encashment this month on the HR File page must be greater than zero.
Cannot save an advance.	The monthly instalment is higher than the gross salary. Add instalments.
Renewals due shows everyone, or the wrong people.	The list uses the Contract end date on the Payroll page, not the automatic annual review date. Set that end date. Open-ended contracts (no end date) are not listed.
Probation ending is empty or shows everyone.	The list uses the trial / probation end date on the Payroll page, due in the next 10 days. Save the employee so the HR File probation end is copied to Payroll, or set it on Payroll.
Probation date did not change with the hire date.	Probation set manually is ticked. Untick it and set the hire date again.

Problem	Solution
No contract alert was received.	The alert is sent once per date. Make sure the employee and manager have work emails and that outgoing mail is configured.
Leave balance is empty.	Select the employees and click Apply leave scheme on the list (or Actions). The form button still works for one person.
Demo data is still there after unticking.	Open **Tarco HRIS › Configuration › Demo data**, leave Activate demo data unticked and click Apply. Only records created as demo are removed.
Code already used.	Each employee code must be unique, including archived employees. Clear the code and save, or use Actions > Generate employee code, to get the next free code.
Employee has no code or an old-style code.	Select the employees in the list and use Actions > Generate employee code.
Tax or insurance missing on the payslip.	Check Subject to tax / insurance, the % and the salary are set. With Adjust taxes automatically, the scheduled action posts it within a day; otherwise click Post tax and insurance.
Post tax and insurance does nothing.	The month is already posted (see Taxes posted for). Edit the existing adjustment in Payroll instead.
Interview not in the calendar.	Set the interview date and time, then click Email interview time again. The meeting is created or updated.

CHAPTER 17

17 Support

How to reach Soft Guide Technology.

For training, changes or support on Tarco HRIS, contact **SOFT GUIDE TECHNOLOGY** at **www.softguidetech.com**.

SG **SOFT GUIDE TECHNOLOGY**
www.softguidetech.com
Odoo implementation, customisation, training and support

When you report a problem, include the menu you used, the employee code, the record number (for example PEN/2026/0012) and a screenshot.
